I have no idea
what I am doing.

I organized 4-6 conferences, regardless.

The dark side of Matz

MINSWAN

Matz is nice
so we are nice

TRUE?

DST

The biggest work program since
the invention of time itself.

Ruby 1.6 release notes (Obsolence doesn’t matter).

```
Thu Apr 5 02:19:03 2001
Yukihiro Matsumoto <matz@ruby-lang.org>

* time.c (make_time_t):
proper (I hope) daylight saving time
handling for both US and Europe. I HATE DST!
```

WHOA!

What else does Matz hate?

Reference counting

```
Sat May 29 12:27:00 1999
Yukihiro Matsumoto <matz@netlab.co.jp>

* ext/tcltklib/tcltklib.c (ip_invoke):
proper ref count management
to avoid leak. I HATE REF COUNTING!!
```

Multiple inheritance

“ Removing the distinction would mean going back to multiple inheritance, which I hate.”

autoload

“ I hate autoload. autoload is one of things I regret. I’m not positive about enhancing something that I hate.”

What does really enrage him?

Non-free software

“ VC again? When can I expect MS to stop ignoring more-than 10 years old standard? I’m getting sick of it.”

Grading

The level of hate in Matz is around 0.01
Linus, which is about 0.001 micro-de-Raadt.
