5 signs of a rockstar developer.

This article is based on the following personal experiences:

- Heading Tech Recruitment at Sourcebits (along with Marketing & HR)
- Initiating Android/ROR based open-source project (better it)
- Founding a mobile only startup [yelo*]

Before my startup, I 'officially' headed HR & Tech Recruitment at Sourcebits (a Sequoia funded mobile company with services + product, game and hardware studios). Later I started an open-source project followed by my startup which further adding to my experience in spotting the right tech talent. I hired and hired due to various reasons about 100's of developers. And overtime I saw hiring teams develop few key indicators of a 'good fit' and reliable indicators of someone being a good techie.

The Obligation of the Programmer.

15 November 2014

We rule the world.

We programmers. We rule the world. We write the rules that make our society work.

Think about it; and think about it carefully. *Nothing* happens in our society without software. *Nothing*.

It's certainly true that the Earth turns, the Sun rises, the rain falls, and the tides recede and advance without the aid of software. But in our society, virtually nothing happens without the involvement of some kind of computer program.

Without software: Phones don't ring. Cars don't start. Planes don't fly. Bombs don't explode. Ships don't sail. Ovens don't bake. Garage doors don't open. Money doesn't change hands. Electricity doesn't get generated. And we can't find our way to the

to ke

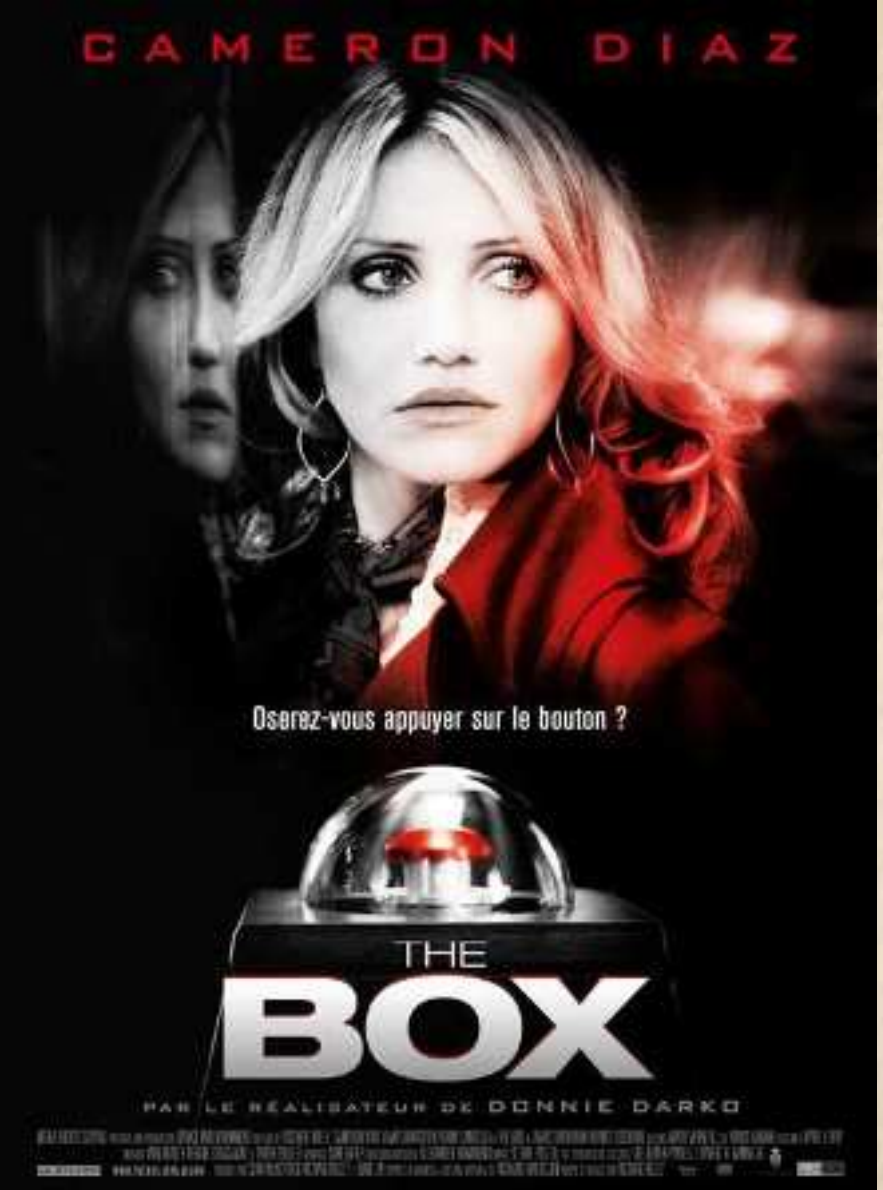
Consider this oath which I have adapted from the Order of the Engineer

> I am a computer programmer, I take deep pride in my profession.
>
> - To it I owe solemn obligations.
> - All human progress has been spurred by the genius of those who manipulate information.
> - By making it possible to manipulate vastly more information than ever before, programmers have created enormous benefits for human society and greatly accelerated human progress.
> - Were it not for the accumulated knowledge and experience of those programmers, mathematicians, and engineers who came before me, my efforts would be feeble.
> - As a programmer, I pledge to practice integrity and fair dealing, tolerance, and respect, and to uphold devotion to the standards and the dignity of my profession, conscious always that my skill carries with it the obligation to serve humanity by making the best use of the precious resources under our stewardship.
> - As a programmer, in humility and with the need for guidance, I shall participate in none but honest enterprises.
> - When needed, my skill and knowledge shall be given without reservation for the public good.
> - In the performance of duty and in fidelity to my profession, I shall give the utmost.
>
> - The Obligation of the Programmer

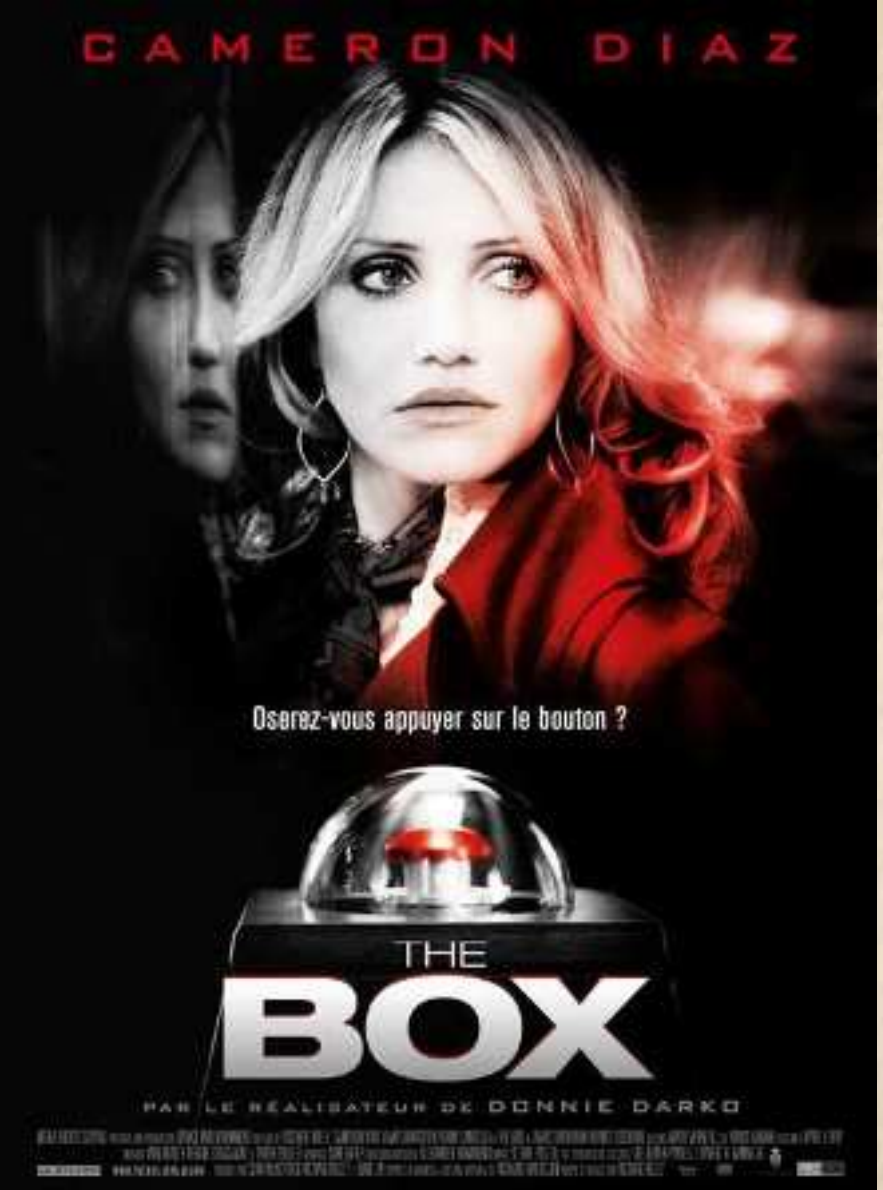
We are the rulers of the world. It's not a position we wanted. It's not a position we anticipated. But here we are. We write the rules. We hold the strings. Now we have to decide what to do with them.

"As a programmer,
in humility and with the
need for guidance,
I shall participate in
none but honest enterprises."

A MOVIE ABOUT A BUTTON



“- If you push the button, two things will happen. First, someone, somewhere in the world, whom you don't know, will die. Second, you will receive a payment of one million dollars. “



"- If you push the button, two things will happen. First, someone, somewhere in the world, whom you don't know, will die. Second, you will receive a payment of one million dollars. "

"- So, what happens now?
- ... The button unit will be reprogrammed, and offered to someone else, with the same terms and conditions … I can assure you it will be offered to someone whom you don't know."

Bill Gates: People Don't Realize How Many Jobs Will Soon Be Replaced By Software Bots

JULIE BORT

FACEBOOK LINKEDIN TWITTER EMAIL PRINT

Big changes are coming to the labor market that people and governments aren't prepared for, Bill Gates believes.

Speaking at Washington, D.C., economic think tank The American Enterprise Institute on Thursday, Gates said that within 20 years, a lot of jobs will go away, replaced by software automation ("bots" in tech slang, though Gates used the term "software substitution").

This is what he said:

> "Software substitution, whether it's for drivers or waiters or nurses ... it's progressing. ... Technology over time will reduce demand for jobs, particularly at the lower end of skill set. ... **20 years from now, labor demand for lots of skill sets will be substantially lower.** I don't think people have that in their mental model."

He's not the only one predicting this gloomy scenario for workers. In January, the Economist ran a big profile naming over a dozen jobs sure to be taken over by robots in the next 20 years, including telemarketers, accountants and retail workers.

Gates believes that the tax codes are going to need to change to encourage companies to hire employees, including, perhaps, eliminating income and payroll taxes altogether. He's also not a fan of raising the minimum wage, fearing that it will discourage employers from hiring workers in the very categories of jobs that

Because Liferay is also known for its contributions to the greater good, what does Liferay do for charitable causes?

Liferay has a really strong charitable aspect. It's one of the reasons why we did not go public or took any VC funding. The founders have decided that one of the main reasons for the existence of Liferay is to contribute back financially into the community and not just in the open source community. This is for all community in general.

The Liferay Foundation's goal has nothing to do with software. The Foundation contributed to multiple types of events like national disasters like the recent hurricane in the Philippines. Liferay matched dollar for dollar the contributions by Liferay employees and their friends and family.

Liferay provides not only funds through the Liferay Foundation — they also do good work by using the development team to do free services. So with Liferay, there's a lot of web development expertise, allowing them to help those like World Impact, by developing their web infrastructure. We give people training in Liferay, and that provides those people a skill to find work. But the strong foundation is part of Liferay.

One of Liferay's many volunteer field trips: disaster relief after japan tsunami

We also have employee incentive programs. Liferay employees can have one additional week of paid time off per year for volunteer work. And Liferay matches a substantial amount of employee contributions with other charities.

Giving is the core to Liferay's board and founder, and that is why we do not take VC funding and it's why Liferay is not looking to get acquired.

Read Magic Quadrant

+ Feedback

AlloyUI

AlloyUI is a UI framework that helps you build robust and flexible web applications.

It is a JavaScript library, a CSS framework, a set of HTML recipes and a taglib library, that leverages patterns from the best libraries to empower developers across multi-skilled teams to deliver rich and dynamic applications.

Liferay Faces

Liferay Faces is an umbrella project that provides support for the JavaServer™ Faces (JSF) standard within Liferay Portal.

Liferay IDE

Liferay IDE is a best of breed set of Eclipse plugins that expedites and simplifies plug-in development with the Liferay Portal platform.

Liferay Portal

Liferay Portal is an enterprise web platform for building business solutions that deliver immediate results and long-term value. It started out as a personal development project in 2000 and was open sourced in 2001. There is an open source "Community Edition" (CE) project as well as an "Enterprise Edition" (EE) product. Learn more about Liferay Portal CE here.

Liferay Screens (beta)

Liferay Screens is a library of visual components for mobile developers to build gorgeous apps using Liferay as a back end. Featuring a wide array of customizable and themable widgets, Liferay Screens makes developing apps easier than ever.

Liferay Social Office

Liferay Social Office is a social collaboration solution for the enterprise that streamlines communication, saves time, builds group cohesion and raises productivity. There is an open source "Community Edition" (CE) project as well as an "Enterprise Edition" (EE) product. Learn more about Liferay Social Office CE here.

Liferay Mobile SDK

The Liferay Mobile SDK is a framework for building native mobile apps that integrate with your different Liferay Portal instances and their portlets. The SDK provides the means for your mobile apps to easily consume Liferay Portal's core web services and the web services of your custom portlets. It wraps Liferay JSON web services, takes care of authentication, makes HTTP requests (synchronously or asynchronously), parses JSON results and handles server side exceptions.

The Liferay Mobile SDK is compatible with Liferay Portal 6.2 and later, and it comes with the Liferay Android SDK and Liferay iOS SDK ready for you to download and use.

README.md

Liferay Screens

Table of Contents

Introduction

Screens is Liferay's effort to speed up and simplify the development of native apps for mobile devices. This may grow to include apps for any of the new categories of smart devices that are currently emerging. Liferay Screens provides a common infrastructure and a family of components called screenlets that are connected to the Liferay platform. This allows your mobile applications to leverage the wide variety of server-side features that Liferay already provides.

Before Screens, you could leverage those features by developing mobile apps using the Liferay Mobile SDK. However, Mobile SDK is a low-level layer on top of the Liferay JSON API. This means that you need to know what Liferay's remote services are and how to make specific calls to them. If you already know some of those Liferay concepts, then you may want to take a look at the Mobile SDK documentation to check whether it's convenient for your needs.

RepRap

English

About | Development | Community | RepRap Machines | Resources

Welcome to RepRap.org

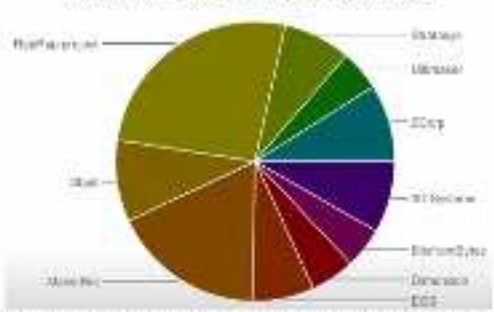
RepRap is humanity's first general-purpose self-replicating manufacturing machine.

RepRap takes the form of a low-cost 3D printer capable of printing plastic objects. Since many parts of RepRap are made from plastic and RepRap prints those parts, RepRap self-replicates by making a kit of itself - a kit that anyone can assemble given time and materials. It also means that - if you've got a RepRap - you can print lots of useful stuff, and you can print another RepRap for a friend...

RepRap is about making self-replicating machines, and making them freely available for the benefit of everyone. We are using 3D printing to do this, but if you have other technologies that can copy themselves and that can be made freely available to all, then this is the place for you too.

Reprap.org is a community project, which means you are welcome to edit most pages on this site, or better yet, create new pages of your own. Our community portal and New Development pages have more information on how to get involved. Use the links below and on the left to explore this site content. You'll find some content translated into other languages.

RepRap was the first of the low-cost 3D printers, and the RepRap Project started the open-source 3D printer revolution. It has become the most widely-used 3D printer among the global members of the Maker Community.



A family using one RepRap to print only 20 domestic products per year (about 0.03% of the products available) can expect to save between $300 and $2000.

"...the unavoidable conclusion from this study is that the RepRap is an economically attractive investment for the average US household already."
